

## ONLINE SECURITY

While online shopping presents a world of great experiences, it has also given rise to new security risks. Mtt Structures is committed to helping you stay safe online and we've put together some points you should always keep in mind:

Ensure that the URL is secure by checking if it starts with https:// - the "s" after "http" shows you that it is a secure site. Some browsers will also indicate a secure site by displaying a lock icon appear before the website URL. If you are unsure, try searching for the company and website online to see if there have been any complaints or reports of fraudulent activities.

Ensure you have an updated anti-virus programme installed. This will protect your browsing device against any malicious sites and will alert you before allowing you to access such sites.

Be careful of phishing scams. Don't click on links in suspicious emails or on any suspicious sites – particularly when it requires you to enter any personal details. If you are unsure of the source of emails or the site, be sure to verify this with the Customer Contact Centre instead.

When signing-up for an account, choose a strong password that combines uppercase and lowercase letters, at least one digit and a special character such as "!", "#" or "\$". Avoid birthdays and easy combinations such as, "1234" or "0000".
